Reliability

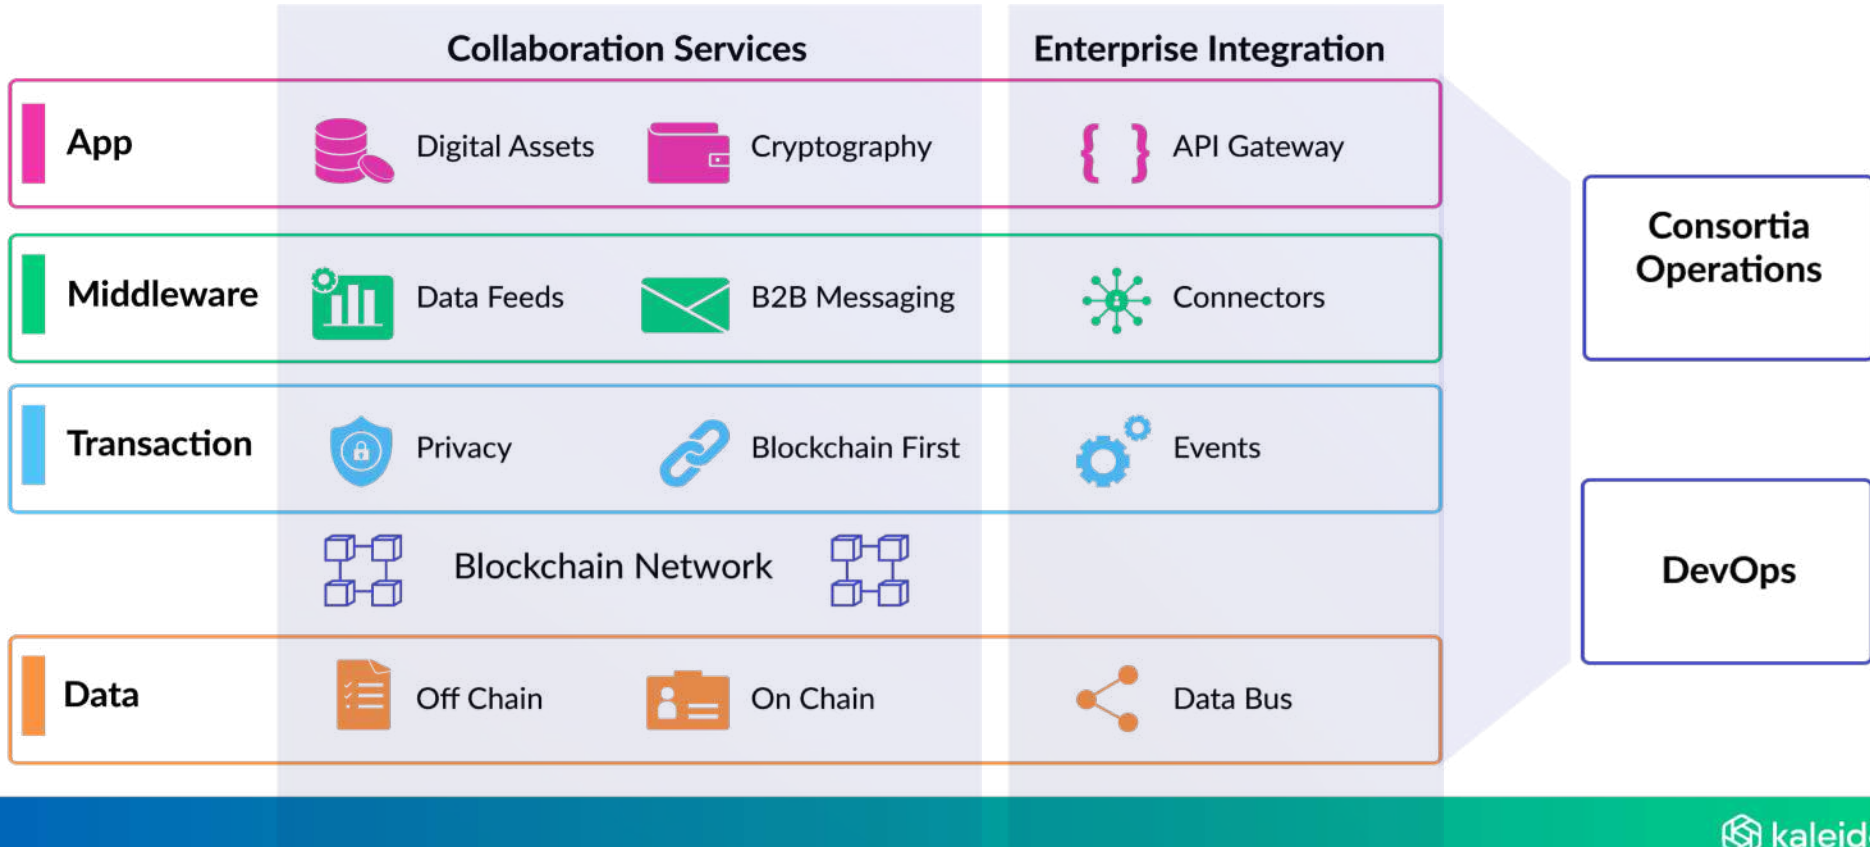

Modernizing Business Networks

Typical projects have over 40 components

The chain is
ONLY 5%
of a complete
blockchain solution

Full-Stack Blockchain for the Modern Business Network

The Challenge

The commodities trade financing industry is maintained by a surprisingly outdated set of systems and data management.

The business is huge, complex, multinational, and interconnected.

Governments have different regulations and political nuances

The Solution

A blockchain-based open network that brings commodity trade finance into the 21st century by:

- Optimizing financing processes
- Accelerating industry operations
- Digitized transactions
- Trusted source of documents to reduce fraud

komgo

MEMBERS INCLUDE

The Results

In production with 15 global stakeholders in less than 4 months

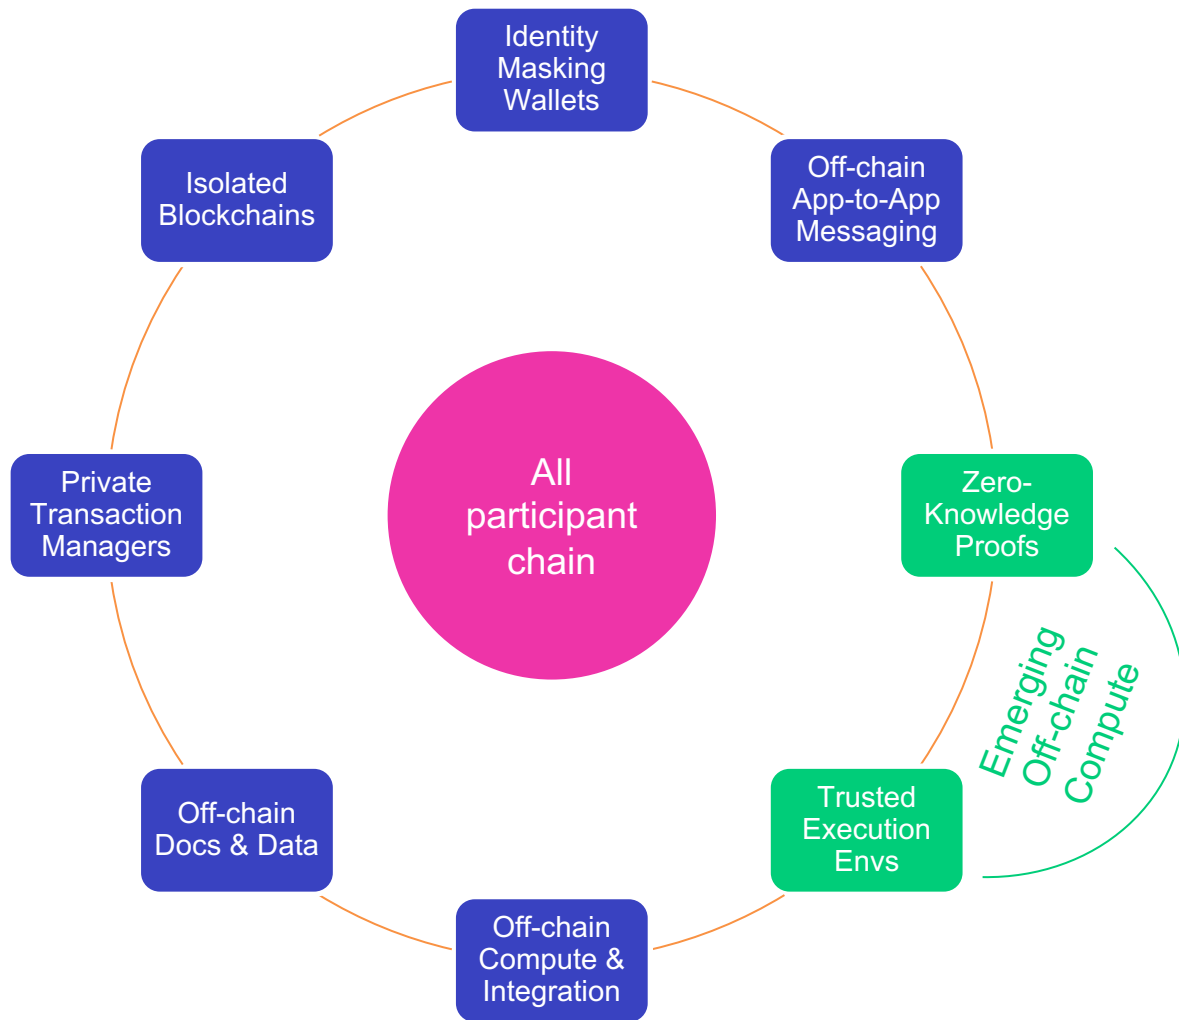

Cash flow gains of 30 - 40%

Full process allows maximum efficiency, 100x faster

Coordination with decreased human error and fraud

Private Asset Transfer

Keep sensitive transactional data off the blockchain with zero-knowledge proof cryptography

Enterprise-Grade Quality

Keep transaction details private while maintaining high availability and performance with a robust, production ready solution.

Standard Complaint Cryptography

Future-proof your blockchain with a privacy solution that adheres to specifications defined by ZKProof.org, an open initiative of industry and academia to standardize the use of zero-knowledge proofs.

Controlled Transparency & Scaling

Use permissioned auditing tools and stay compliant with GDPR, CCPA and other local data privacy regulations. Generate zero-knowledge proofs using proprietary proof chaining (parallel proofing) technology that keeps pace with your transaction volume.

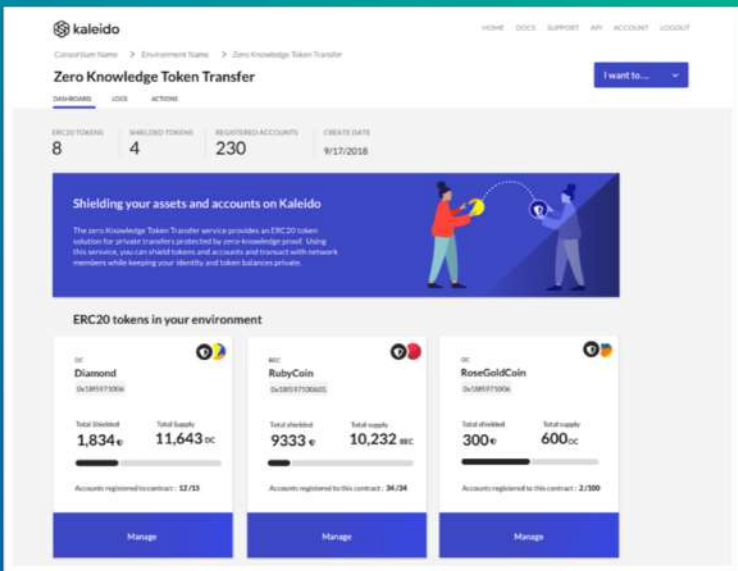

Zero Knowledge Token Transfer

An ERC20 Token
solution for private
transfers

Innovative & Proven ZKP Technology

Zero Knowledge Token Transfer makes use of the latest technologies around zero-knowledge proofs and advanced cryptography.

Fully integrated with ERC20

Incorporate ERC20 (fungible) tokens for any use case requiring privacy and anonymity.

Anonymous Token Transfers

Transact with members of your network without disclosing the details of token amounts or parties involved.

Demo time

- Industry-first innovations
- Full-stack blockchain solution
- Built for enterprise
- Grows with your network
- Consultative approach
- Production infrastructure
- Production support
- Deep expertise
